

1. Office Automation (Word Processor)

A.BASIC OPERATIONS

Lab 1: Introduction to Word Processor

A word processor is application software used for creating, editing, formatting, saving, and printing documents. Microsoft Word is one of the most widely used word processors in the world. It allows users to create professional documents, letters, reports, assignments, tables, and resumes. Word processing software also provides tools such as spell checking, grammar checking, inserting images, tables, headers, and footers.

Lab 2: Create a Document and Apply Formatting

To create a document in Microsoft Word, first open MS Word from the Start Menu. A blank document opens automatically. Type the required text and apply formatting such as bold, italic, underline, font size, font color, and font style. Formatting improves the appearance and readability of the document.

Shortcut Keys:

Ctrl + B = Bold

Ctrl + I = Italic

Ctrl + U = Underline

Lab 3: Page Margins, Orientation, and Page Size

Page setup is important while preparing professional documents. Margins define the blank space around the page. Orientation can be Portrait or Landscape. Page size may be A4, Letter, or Legal depending on requirements. These settings are available in the Layout tab of MS Word.

Lab 4: Header, Footer, and Page Numbers

Headers appear at the top of every page and footers appear at the bottom. They usually contain page numbers, document titles, dates, or author names. Page numbers help organize documents and make navigation easier.

Insert Header:

- Insert tab > Header > Edit Header > Type your text > Close Header and Footer.

Insert Footer:

- Insert tab > Footer > Edit Footer > Type your text > Close Header and Footer.

Insert Page Numbers:

- Insert tab > Page Number > Choose position (Top, Bottom, Margins) > Select a style.

B. EDITING & FORMATTING

Lab 5: Copy, Cut, Paste and Find & Replace

Editing tools include copy, cut, paste, undo, redo, find, and replace.

Copy, Cut, Paste:

- Copy: Select text > Ctrl+C (copies without removing).
- Cut: Select text > Ctrl+X (removes and copies to clipboard).
- Paste: Place cursor at destination > Ctrl+V (inserts clipboard content).

Find and Replace:

- Press Ctrl+H to open Find and Replace dialog.
- In 'Find what' type the word to search; in 'Replace with' type the replacement.
- Click Replace (one at a time) or Replace All (all occurrences at once).

Lab 6: Paragraph Formatting

Paragraph formatting includes text alignment, indentation, line spacing, and bullets. The four main alignments are Left, Center, Right, and Justify. Proper paragraph formatting makes documents neat and professional.

Alignment Options:

- Left Aligned (Ctrl+L): Text is aligned to the left margin.
- Center Aligned (Ctrl+E): Text is centered on the page.
- Right Aligned (Ctrl+R): Text is aligned to the right margin.
- Justified (Ctrl+J): Text is aligned to both left and right margins creating a clean block appearance.

Line Spacing and Indentation:

- Line Spacing: Home tab > Line and Paragraph Spacing > Select 1.0, 1.5, or 2.0.
- Indentation: Use Increase Indent (Ctrl+M) or Decrease Indent (Ctrl+Shift+M).
- First Line Indent: Paragraph dialog > Indentation > Special > First Line.

**2. Spreadsheet (Excel)****A.BASIC CONCEPTS****Lab 9: Cell Address and Referencing in Excel**

A **cell address** identifies the location of a cell using column letters and row numbers such as A1 or B5. Excel uses relative, absolute, and mixed referencing. **Relative references** change automatically when formulas are copied, while **absolute references** remain fixed using the dollar (\$) symbol.

Lab 10: Student Mark Sheet

A student mark sheet is prepared in Excel using formulas. Columns include Roll Number, Student Name, Subject Marks, Total, Percentage, Result, Division, Grade, and Rank.

STUDENT MARK SHEET											
Academic Year: 2025-2026											
Roll No.	Student Name	Mathematics (Max: 100)	Science (Max: 100)	English (Max: 100)	Social Studies (Max: 100)	Computer (Max: 100)	Total (Max: 500)	Percentage (%)	Grade	Result	Rank
1	Aarav Sharma	85	78	92	74	88	417	83.40%	A	Pass	4
2	Priya Thapa	91	88	76	83	95	433	86.60%	A	Pass	2
3	Rohan Karki	62	70	68	55	60	315	63.00%	B	Pass	8
4	Sita Gurung	76	82	80	78	72	388	77.60%	B+	Pass	6
5	Bikash Rai	95	90	88	92	97	462	92.40%	A+	Pass	1
6	Anita Shrestha	45	52	60	48	55	260	52.00%	C	Fail	10
7	Dipesh Magar	73	68	75	70	65	351	70.20%	B+	Pass	7
8	Kavita Tamang	88	85	90	82	84	429	85.80%	A	Pass	3
9	Suraj Poudel	55	60	50	58	62	285	57.00%	C	Fail	9
10	Nisha Basnet	80	76	84	79	77	396	79.20%	B+	Pass	5

B.FUNCTIONS & DATA PROCESSING

Lab 11: Basic Arithmetic Formulas

Excel supports arithmetic operations such as addition, subtraction, multiplication, and division. Formulas always begin with an equal sign (=).

Examples:

=A1+B1 for Addition

=A1-B1 for Subtraction

=A1*B1 for Multiplication

=A1/B1 for Division

Lab 12: Logical Function IF Condition

The IF function is a logical function used to make decisions in Excel. It checks whether a condition is true or false and returns appropriate results.

Syntax:

=IF(condition, true_value, false_value)

Example:

=IF(B2>=40,"PASS","FAIL")

Lab 13: SUM, AVERAGE, MAX, MIN Functions

Excel provides built-in functions for calculations.

SUM adds values.

AVERAGE calculates mean.

MAX finds the highest value.

MIN finds the lowest value.

COUNT counts numeric entries.

Examples:

=SUM(A1:A10)

=AVERAGE(A1:A10)

=MAX(A1:A10)

=MIN(A1:A10)

Lab 14: Sorting and Filtering Data

Sorting arranges data in ascending or descending order. **Filtering** displays only selected data according to conditions. These features help users analyze large amounts of information easily.

Sorting Data:

- Select any cell in the column to sort > Data tab > Sort A to Z or Sort Z to A.
- Multi-level sort: Data > Sort > Add Level for additional criteria.

Applying Filters:

- Select the header row > Data tab > Filter (Ctrl+Shift+L).
- Click dropdown arrows in header cells to filter by values or conditions.
- Remove filter: Data tab > Clear, or click Filter again to toggle off.

Lab 15: Creating Charts

Charts present data graphically. Bar charts compare values between categories, while pie charts show percentage distribution. Charts make reports visually attractive and easier to understand.

Bar Chart:

- Select data range including headers > Insert tab > Bar Chart icon > Choose style.
- Use Chart Tools to add title, axis labels, and format colors.

Pie Chart:

- Select labels and values > Insert tab > Pie Chart icon > Choose style.
- Right-click chart > Add Data Labels to show values on each slice.

**Lab 16: Invoice and Bill Sheet**

An invoice sheet contains item names, quantity, unit price, discount, and total amount. Excel formulas automatically calculate the grand total.

Example Formula:

=B2*C2*(1-10%)

3. Presentation (Powerpoint)

Lab 17: PowerPoint Presentation

Microsoft PowerPoint is presentation software used to create slide shows. A presentation usually contains a title slide, content slides, images, charts, and a conclusion slide. PowerPoint is commonly used in education and business.

Steps to Create a Presentation:

- Open Microsoft PowerPoint > Select Blank Presentation or a template.

Minimum 5 Slide Structure:

- Slide 1 - Title Slide: Main title and subtitle of the presentation.

- Slide 2 - Content Slide: Heading with bullet point text content.
